

OFF-MARKET REDEVELOPMENT FINDER

Region Stuttgart — Underappreciated Asset Scoring Model

1. Target Geography

Developer must search only in:

- Stuttgart
- Ludwigsburg
- Esslingen
- Böblingen
- Rems-Murr-Kreis
- Göppingen

Priority municipalities

- Waiblingen
- Weinstadt (Endersbach focus)
- Filderstadt

2. HARD FILTER (Immediate Elimination)

Remove property if:

- heritage protected
- zoning does not allow meaningful densification
- building already uses $\geq 75\%$ of allowed volume
- major renovation in last 15–20 years
- parcel $< 800 \text{ m}^2$

Only surviving objects go into scoring.

3. REQUIRED DATA FIELDS

Developer must collect:

Parcel

- parcel number (Flurstück)

- parcel size
- coordinates

Building

- footprint
- floors built
- construction year
- renovation history

Zoning

- zoning category
- GFZ (floor area ratio)
- allowed floors

Heating / Energy

- heating type
- energy class
- heating modernization permits

4. WHERE TO GET THE DATA (IMPORTANT)

Parcel + Zoning + Buildings (Government GIS)

Developer must use:

- **BORIS-BW** (land value + parcel layers)
- **Geoportal Stuttgart**
- **Geoportal Landkreis Ludwigsburg**
- **Geoportal Landkreis Esslingen**
- **Geoportal Rems-Murr-Kreis**
- **Geoportal Landkreis Böblingen**
- **Geoportal Landkreis Göppingen**

From these portals extract:

- parcel boundaries
- parcel size
- zoning polygons
- building footprints
- sometimes building height

Bebauungsplan Documents

Search on municipality websites:

👉 "Bebauungsplan + street name"

Extract:

- GFZ
- GRZ
- allowed floors
- density rules

Heating / Renovation Signals (Government Sources)

Developer should check:

- municipal **Wärmeplanung** portals
- Stuttgart Wärmeatlas
- district heating network maps (e.g. Stuttgart Netze / EnBW)
- Baugesuch portals (search: "Baugesuche + municipality")
- environmental or energy transition reports

These help detect:

- oil heating probability
- gas dependency
- modernization absence

Optional Supporting Sources

- archived listings (Immobilienscout24, Immowelt)
- broker exposés
- EPC references

5. SCORING MODEL (Only What Matters)

Each property gets a **Redevelopment Opportunity Score**.

A. FLOOR UPSIDE SCORE (Very Important)

Calculate:

$$\text{floor_gap} = \text{allowed_floors} - \text{built_floors}$$

Score:

- gap ≥ 3 floors $\rightarrow +6$
- gap = 2 floors $\rightarrow +4$
- gap = 1 floor $\rightarrow +1$

This is the strongest signal.

LOGIC: An Object that has 2 floors, but that zone is for 5 floors. This is a typical +6 scenario.

B. UTILIZATION GAP SCORE (Very Important)

Calculate:

$$\text{utilization_ratio} = \text{built_gfa} / \text{allowed_gfa}$$

Score:

- $\leq 40\%$ used $\rightarrow +6$
- 41–55% used $\rightarrow +4$
- 56–65% used $\rightarrow +2$

If $>65\%$ $\rightarrow$ weak candidate.

LOGIC: Parcel size: **1,200 m²**

Allowed floor area (GFZ): **2,400 m²**

Existing building floor area: **800 m²**

$$\text{Utilization ratio} = 800 / 2,400 = 33\%$$

$\rightarrow$ Large redevelopment potential because most of the allowed building volume is unused.

C. RENOVATION NEGLECT SCORE

Detect last modernization.

Score:

- no renovation ≥ 30 years $\rightarrow +5$

- no renovation 20–30 years → +3
- renovation <15-10 years → 0

D. HEATING DISTRESS SCORE (Main Trigger)

Score:

- oil heating likely / confirmed → +4
- old gas heating → +2
- modern heating → 0

Heating modernization risk increases seller motivation.

E. AGE SWEET SPOT BONUS

Score:

- building age 60–70 years → +3
- age 50–60 → +2
- age 40–50 → +1

Too new → 0

Too old with heavy restrictions → weak.

F. PARCEL POTENTIAL BONUS

Score:

- parcel $\geq 1500 \text{ m}^2$ → +3
- parcel 1000–1500 m^2 → +2
- parcel 800–1000 m^2 → +1

6. FINAL SCORE CALCULATION

`total_score = floor_upside + utilization_gap +
renovation_neglect + heating_distress + age_bonus +
parcel_bonus`

Then sort:

👉 Highest total_score first

This ranking shows:

- strongest legal upside
- strongest neglect pattern
- strongest acquisition probability

7. OUTPUT FIELDS

Developer must export:

- address
- municipality
- parcel size
- built floors
- allowed floors
- built GFA
- allowed GFA
- % utilization
- construction year
- renovation status
- heating signal
- total score
- coordinates

Example reason:

"Parcel 1,320 m²; built 2 floors but zoning allows 5; only 43% of allowed volume used; no renovation since 1985; likely oil heating."
