

C4 · Selected Opportunities & Mandate

The cart becomes a contract. The client mandates Antberg to go and buy.

What this screen is for

Everything the client selected gathers here. This is where interest turns into commitment: the client mandates the objects — one by one or all together — and a buy-side contract is generated automatically with every detail already filled in (who orders, who executes, which properties, which addresses). The signing itself is deliberately physical: print, sign, confirm by email. The screen's job is to make that offline step feel controlled and trackable, not bureaucratic.

What is on the screen

Selection table	One row per object: ID, location, score, ticket, remove. Under the table one line of totals: number of objects and total estimated ticket. Nothing else.
Mandate scope	The client chooses what to mandate: everything in the table, or individual objects. Partial mandates must feel just as clean as full ones.
Generated contract	A preview of the buy-side mandate with real details: client name, Antberg, the full property list with addresses. Generated automatically from the selection.
Suggest changes	The client can request changes; a new contract version is generated automatically. This is a loop on the document, not a status of its own.
Status line	Three states only: Draft → Client signs → Active. The physical steps (print, sign, send by email, receive countersigned) all live inside 'Client signs'.
Download / Upload	Download the contract for signing; upload the signed version. When the countersigned contract is back, the mandate is Active and the pipeline begins.

How the user moves through it

- 1 The client reviews his selection and removes anything that no longer convinces him.
- 2 He chooses the mandate scope — all objects or a subset.
- 3 He reads the generated contract and, if needed, requests changes (a new version comes back automatically).
- 4 He downloads, prints, signs, and sends it; Antberg countersigns and confirms.
- 5 The status turns Active — and the objects appear in the Pipeline (C6).

Notes for the design

- One table, one status line, two buttons. This screen carries legal weight — calmness equals trust.
- Never show five bureaucratic status states; three are enough, the rest is noise.
- The contract preview should look like a serious document, even in the wireframe.
